

Tools for Describing the Unique Data and Functions of Your Application

Choosing what unique functions and data are accessible in your application with KB_SQL's Dictionary Management Utilities gives you flexibility. You can write your own functions and stored procedures to make your data behave in ways that will benefit your organization and deliver information the way you need it.

- System Administration Utilities
- Security Utilities
- Device Management Utilities
- Report and Activity Log

DBA Utilities: Tools for Managing KB_SQL

Utilities can also help you monitor activity on your application. Generate reports regarding who has submitted queries, what queries have been submitted, and when. You can stop a currently running query and generate statistics on the data in your system.

Choosing how and when your users can access your data has never been easier. With the assistance of KB_SQL's DBA Utilities, you can assign users to specific Data Dictionary Resources, customize security protocols, set locks on sensitive data, set up enterprise printing and output devices, and ensure your data is compliant with HIPAA requirements.
